

[Casual-Markdown-Page](#) directly use markdown files as web page or web site (ie. markdown-as-webpage).

Just a single html file [index.html](#) to load markdown file into web page by the syntax of `index.html?file={markdown-file.md}`

It is very handy to build simple web-site from markdown files, for example,

- github (self-host): <https://raw.githack.com/casualwriter/casual-markdown-page/main/source/index.html>
- all-in-one version: <https://raw.githack.com/casualwriter/casual-markdown-page/main/source/index-one.html>
- github page: <https://casualwriter.github.io/casual-markdown>
- github page: <https://casualwriter.github.io/>
- direct render md file: <https://casualwriter.github.io/casual-markdown?file=https://raw.githack.com/casualwriter/powerpage/main/README.md>

Features

- single html, all-in-one version [index-one.html](#)
- vanilla javascript, no dependence
- support all browser (include IE9)
- dark mode
- responsive, support mobile

Usage Guide

1. copy [index.html](#) or [index-one.html](#) to web server
2. copy [index.md](#) and other files (*.md) to the folder

that's it!

- by default, it will load `index.md` as home page.
- hotkey [alt-s] to show markdown html for developer
- hotkey [alt-k] to showpage in dark mode
- for mobile, click on title to show/hide TOC.
- use frontmatter for page configuration (title, menu, navigation), for example

```
-----
github   : https://github.com/casualwriter/casual-markdown
title    : Casual-Markdown
style    : #header { background: RoyalBlue } // additional style, optional
menu     :
  Home           : index.md
  Supported Syntax: md-syntax.md
```

```
md-as-Doc      : md-as-doc.md
md-as-Page     : md-as-page.md
md-as-Blog     : md-as-blog.md
[DarkMode]     : javascript:darkmode()
```

```
## {{ title }}
```

[casual-markdown]({{github}}) is a super lightweight RegExp-based markdown parser,
with TOC and scrollspy support

Modification History

- 2022/08/11, v0.60, initial release.
- 2022/08/12, add all-in-one version. [index-one.html](#)
